

## The Components Of Your Immune System.

Keeping these components (systems and organs) healthy and functioning at peak capacity, is vital to staying well and productive in a world where sickness is the norm.

*A wise man suspects the truth and rediscovers it for himself or he seeks out those who already have.*

— Roger Bezanis

*When a man gets sick enough, he stops and learns how to fix himself or he stops and dies. Pain is the great motivator.*

— Roger Bezanis

**What machine have you owned since birth and are operating right now, that you know virtually nothing about?**

**Answer: Your body!**

**Therefore get these books as you can only fix what you understand.**

# SEASONAL RESCUE

The ultimate all around, cold, flu, allergy and bacteria weapon!

**Stop what stops  
you dead in its tracks!**

**Seasonal Rescue™**

DISTRIBUTED BY:

## Earth is an incubator for rampant carnivorous germs and bacteria!

That is what an extraterrestrial might say if he studied Earth for any length of time. It takes work to stay well. Look at the news, flu this and colds that everywhere. If it is not the Asian Flu it is the San Juan Turtle Dove Coughing Disease or some such thing.

Any of our elements can make us sick, rain, sleet, snow, heat, cold etc. All of these variables take their toll on us and leave us susceptible to "coming down" with something. Most people agree, it is not how often you get sick, it is how fast you get well that matters.

Today, with so much against us, diet, elements, chemicals, air pollution, germs, etc it is amazing that our immune systems functions at all.

To understand what an immune system under siege would feel like, imagine that you are a gardener, chemist, sanitation worker, house keeper, soldier, fork lift operator, air traffic control operator and grocery store clerk at the same time and you were being robbed. Under these conditions, being overwhelmed by bio-hazards is easy

**That is why Seasonal Rescue™ is so important. It supports the immune system in resetting itself and doing its job against the odds.**

## How Germs Make Their Way Into Our Immune System?

They can be:

- 1) Inhaled
- 2) Consumed (in food or drink)
- 3) Absorbed (via the skin)

**If it was not for having to breath, eat, drink and interact with the environment we would never become ill.**

The top 10 ways to get germs:

- 1) Cuts and scratches
- 2) Air borne
- 3) The office
- 4) Family
- 5) Food / water
- 6) Pets
- 7) Public facilities including water fountains
- 8) Restaurants
- 9) Make-up counter (lipstick testers)
- 10) Unclean hands and fingernails

## The Lymphatic System

## Who Needs Seasonal Rescue™?

- 1) Anyone who gets sick easily.
- 2) Anyone who works in an office environment.
- 3) Anyone who is exposed to the elements
- 4) Anyone with a history of the flu.
- 5) Anyone who suspects they were exposed to "something."
- 6) Anyone who wants to prevent sickness.
- 7) Anyone who feels rundown.
- 8) Anyone who has or suffers with allergies.
- 9) Anyone who wants to protect themselves from sickness.
- 10) Anyone with a cold.
- 11) Anyone with a fever.
- 12) Anyone with a sore throat.
- 13) Anyone under the weather.

**If you answered yes to any of the questions above, take Seasonal Rescue™.**

## How To Use SEASONAL RESCUE™

**When you feel that you are not at your best.**

*Take 2-5 of Seasonal Rescue™ up to 4 times a day. If your physician or health care professional indicates that you should take another dosage, follow those instructions.*

*Always take Seasonal Rescue™ and all Pure Body Institute formulas with 10 ounces of water.*
